Art Unit: 3635

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 5, 9, are rejected under 35 U.S.C. 102(b) as being anticipated by Stein et al.

Regarding claim 1, 9, Stein et al. teaches mechanical and electrical equipment for buildings. (Title) The word "building" implies a spatial structure having wall and roof structures, which define one interior space, separated from the ambient air in a unitary interior space. Climate in each separate space or zone can be separately regulated by local systems. (Page 321, 322)

Regarding claim 2, Stein et al. shows separate spaces with different functional groups. (Page 433)

Regarding claim 5, there is a separate space (physical education) outside of the unitary space (rest of the building). (Page 203)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/831,279

Art Unit: 3635

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stein et al. as applied in the rejection of claim 1 above in view of Yates et al.

Regarding claim 3, Stein et al. shows the basic claimed structure. Stein et al. does not show Nordic areas. Yates et al. shows Nordic areas (Abstract). It would have been an obvious design choice to cool buildings to Nordic temperatures with the refrigerator/freezer of Yates et al. in order to enjoy Nordic sports such as ice-skating.

Claims 4, 6, 7, 10, 11, 13-15, are rejected under 35 U.S.C. 103(a) as being unpatentable over Stein et al.

Regarding claim 4, 10, 15, Stein et al. shows refrigeration and heating. (Page 321) It does not show the heat from the refrigeration process being used to heat other spaces. It would have been an obvious design choice to use the excess heat in this manner since this would be a good conservation of energy practice.

Regarding claim 6, Stein et al. shows the basic claimed structure. Stein et al. does not show natural plants and animals in apartments. It would have been an obvious design choice to have plants and animals in an apartment since it is designed for human occupancy.

Regarding claim 7, 11, Stein et al. shows the basic claimed structure. Stein et al. does not show seasonal variation of temperatures in its separate spaces. It would have been an obvious design choice to regulate the temperature in the separate spaces of apartments to mimic seasons to the preference of the occupant.

Regarding claim 13, 14, Stein et al. shows the basic claimed structure. Stein et al. does not show functional groups of activities have in common a special

Art Unit: 3635

climatological temperature in the respective separate space and can be observed from outside the separate space through a transparent wall. It is well known in the art that apartments have functional groups of activities sharing a common temperature, which can be observed outside the separate space through a transparent wall or window. It would have been obvious to one of ordinary skill in the art at the time the present invention was made to have shared temperature in functional groups with observation windows in the structure of Stein et al. This would provide for a desirable environment for the inhabitants in the functional groups of activities while enabling the inhabitants to look out of or into their environment.

Claim Objections

Claims 8, 12, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 8, 12, are allowable for a pool having an ice cover and arranged for winter swimming and/or winter jig fishing, the pool having water animals.

Response to Arguments

Applicant's arguments filed 11/18/02 have been fully considered but they are not persuasive. Climatologically different conditions are not defined as to the amount of difference in rainfall and temperature. The special structure of a walk in freezer would allow the space to not freeze plumbing.

Applicant's arguments with respect to claim 3 have been considered but are moot in view of the new ground(s) of rejection.

Kline et al. presents a process and apparatus for individual adjustment of the temperature set points of a plurality of VAV devices through a network server.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steve M Varner whose telephone number is 703 308-1894. The examiner can normally be reached on M-F 7:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl D Friedman can be reached on 703 308-08390839. The fax phone numbers for the organization where this application or proceeding is assigned are 703 305-7687 for regular communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308-1113.
